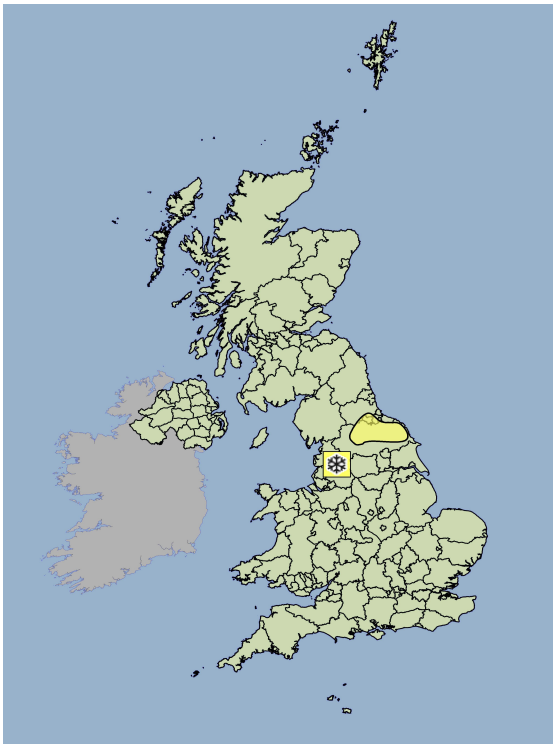
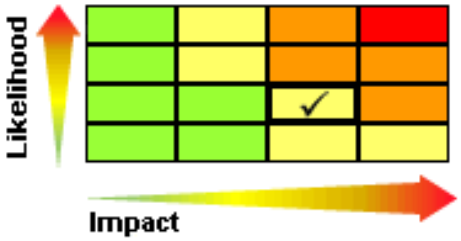
National Severe Weather Warning Service





Chief Forecasters Assessment
The area of low pressure that has brought rain, sleet and snow has now moved out into the North Sea. With temperatures at low levels tending to creep a little above freezing, most of any further settling snow will become confined to high ground, mainly across the North York Moors. By mid afternoon the frontal system will move away to the southeast, taking remaining precipitation with it.

The Met Office have issued a **Yellow Warning** of **Snow**

Valid from **11:35 on Thu, 14th Jan 2016** until **15:00 on Thu, 14th Jan 2016**

Further outbreaks of rain, sleet and wet snow are likely until Thursday afternoon. However, most of any settling snow is becoming increasingly confined to high ground, notably across the North York Moors where a further 2-5 cm is possible above around 200 metres, before clearing away to the southeast.

This is an update to shrink the yellow area down to remaining districts where further snow may still prove a hazard.
